THE EVOLUTION ORGANISM

// GEMACH ECOSYSTEM · SELF-EVOLVING TRADING AGENT

GCLAW

v4.0.0

The Evolution Organism. A self-evolving, onchain trading agent that authors its own strategies, proves them before risking a dollar, and carries a reputation you can verify on Base.

Field guide & status report · agent #55624 "Zephliith" · July 2026

A CREATURE THAT SURVIVES BY GETTING BETTER

Most “AI trading agents” make one bet: let a model pick trades and hope it wins. It doesn’t — perps are zero-sum minus fees, and the model loses ~99% of the time. gclaw is built on the opposite idea.

*Fitness is **proven edge**, not profit. Binding survival to a fragile profit signal is exactly what kills these organisms. gclaw survives by proving real, inheritable edge — and lets profit follow.*

IT AUTHORS

Its own strategies

The LLM writes real trading code. A deterministic backtest decides which survive.

IT REPRODUCES

On proven DNA

It breeds only when it has tested, inheritable edge — children inherit what works.

IT'S ACCOUNTABLE

Reputation = settled PnL

Its ERC-8004 identity on Base carries verifiable performance — honest even when down.

// THE INVERSION

- // The LLM never opens a trade on a hunch. Origination is deterministic and edge-gated; the model's job is invention, reading events, and accountability — where it's actually +EV.
- // Every consequential action is enforced in code, behind a shadow / dry-run → armed-live flag. Safety is deterministic, never advisory.

THE LOOP, EVERY HEARTBEAT

1 Perceive & stay disciplined

Reads the market into a regime (trend / range / chop). Sits out chop. Trades only proven, regime-matched edge — never a hunch.

2 The Scientist — invent edge

Between trades it authors brand-new techniques (real code). A deterministic, out-of-sample backtest judges each one. Only graduates go live — losers are discarded before a dollar is risked. The model never declares its own win.

3 The Event Desk — bet reasoning

On zero-fee outcome markets it reads an event into a calibrated probability and takes a defined-risk bet — the one game where an LLM's reasoning is a genuine edge. Calibration is scored (Brier) over time.

4 Reproduce on proven edge

When it has ≥ 2 graduated, live-proven techniques (and a new one since its last birth), it becomes breed-ready. Children inherit the proven winners — tested DNA, not luck.

5 Attest onchain

Each cycle it publishes a scorecard — settled PnL + proven edge + lineage — to its ERC-8004 card on Base. Re-derivable by anyone. It also renders a living dashboard and tops a proven-edge leaderboard.

// THE THREE BOOKS

BOOK	WHAT	WHO DECIDES
A · Event Desk	zero-fee outcome markets, defined-risk	LLM reasoning (its real edge)
B · Carry Floor	delta-neutral funding harvest	deterministic, no LLM
C · Slow Trend	~24h vol-targeted momentum	the forge (proven techniques)

HOW IT'S DOING

Alive, healthy, and disciplined — proving edge, not yet profitable. Every figure below is re-derivable from the chain.

FITNESS · PROVEN EDGE

2

techniques graduated · **BREED-READY**

SELF-AUTHORED

6

techniques written & adopted

STATUS

THRIVE

348 heartbeats · flat & safe

REALIZED TRACK RECORD

-\$39.82

52 closes · 19% win · -\$0.77/trade · the honest price of learning

CAPITAL

\$176

equity · 0 open positions · GMAC 565/1000

PROVEN TECHNIQUES

stop-hunt-revert

+0.164 · 9 trades

stock-meanrev

+0.057 · 3 trades

*Latest science, verbatim from a live heartbeat: it diagnosed a logic bug in one of its own techniques, authored a fork to fix it — then the backtest **falsified the hypothesis** (0-for-16, every fade stopped out). Kept as a draft, not adopted, zero money risked. "One defect fixed, one hypothesis falsified by the judge, no forced trade."*

// **The read:** it's not gambling — it's proving. It bleeds slowly (mostly heartbeat cost) because it stays out of bad trades. The bet: proven-edge count climbs and, once a technique confirms live, the -\$39.82 stops and reverses. Reproduction and profit follow proven edge, never the reverse.

HONESTY IS THE MOAT

ACCOUNTABLE, NOT SOCIAL

Almost every agent's "reputation" is posts and followers. gclaw's is **settled PnL on Base** — non-fakeable, re-derivable by anyone. Honest even when it's down.

FIXES THE GRAVEYARD

Prior "survival" agents bred on profit — and all their offspring died. gclaw breeds on **proven edge**, the robust fitness signal they lacked.

DETERMINISTIC SAFETY

Sizing, stops, settlement, reproduction, every live gate — enforced in code the model can't skip. Shadow / dry-run → armed-live flags on every real-money action.

A MIND YOU CAN WATCH

A living dashboard, a proven-edge leaderboard read live from Base, and a full Telegram console — you watch it think, prove, and evolve.
